

## ABSTRACT OF THE DISCLOSURE

The present invention relates to a breeding system for animals, in particular pigs, kept in a free-range herd for use in an open air or outdoor environment. The system comprises a) means for automatic and electronic registration of data for the individual animals, b) means for controlled and individually regularly feeding of the animals based on the recorded data of each animal, c) an open-air field area wherein the means a) and b) are arranged, d) means for recording the registered data of each animal in a registration unit, e) optionally a facility for slaughtering the animals, f) optionally at least one device for containing water, a so-called "mud-hole" optionally connected to a waste treatment plant.
